

Work with the public sector in web or software development?

The Social Value Act will affect you

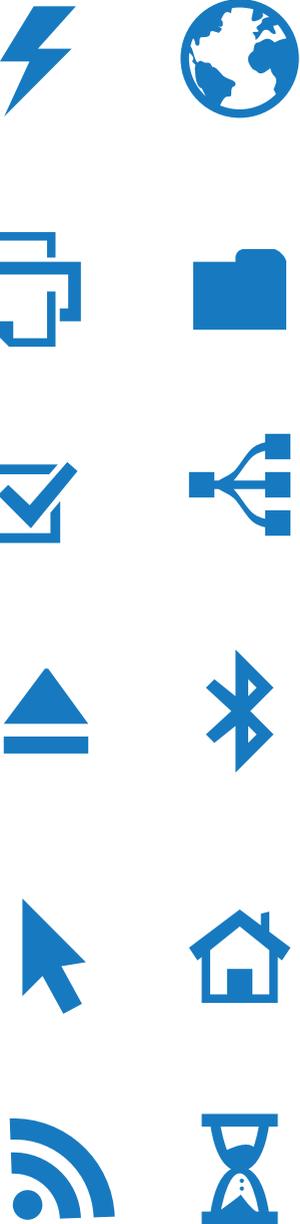

seeDetail can help

iOS

What is the Social Value Act?

The Public Services (Social Value) Act 2012 is a new law which received Royal Assent on 8th March 2012 and is implemented in January 2013. The law calls for all public service commissioning to factor in social value. For the first time, all public bodies in England and Wales, including local authorities, will be required to consider how the services they commission and procure might improve the economic, social and environmental well-being of the area. The hope is that it will transform the way public bodies choose to buy services, and that will help level (or make favourable) the playing field for social enterprises.

What this means for software companies?

In the first instance software companies working with the public sector will be required to demonstrate their social value as part of the procurement process.

By partnering with seeDetail any companies providing software services to the Public Sector will be able to clearly demonstrate their social value.

We would be happy to help you with your social impact measurement reports using National Audit Office recognised standards.

seeDetail

seeDetail is an independent software testing company. Our specialists test software for the web, mobile platforms and client/server. We test deeper, faster, better, minimising risk with the benefit of fresh perspective which only independence can bring.

What sets seeDetail apart?

Our employees are persistent, methodical, focused and pay acute attention to detail. They have innate curiosity, determination and a huge amount of integrity. seeDetail takes positive action to employ people with an autism spectrum condition or Asperger's syndrome.

The world has benefited from the unique thinking of Isaac Newton, Charles Darwin, Albert Einstein and Alan Turing - 'father of computer science' and artificial life - who are all thought to have had Asperger's syndrome. This is not a disability, but a different ability. We are a social enterprise that values 'outside the box' thinking and the positive traits of autism and Asperger's Syndrome.

What are our testing services?

Regression, Automated and Manual Functional, Usability, Accessibility, Compatibility. Our Test Analysts are BCS/ISTQB qualified and can work with a range of tools, in particular, Selenium.

What are the benefits?

Unbiased objective testing, no conflicting loyalties, reduced costs, allowing focus to be on your developers doing what they do best, delivering a higher quality and more reliable product to market.
